TO WHOM IT MAY CONCERN:

Regulations implementing California's Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65) state in part "...that the warning language...will be associated only with consumer products which contain, or which the business connected with the exposure reasonably believe to contain, significant levels of listed chemicals in excess of these levels which are naturally occurring".

A review of the lists being considered and/or adopted by the California Health and Welfare Agency leads us to conclude that none of the listed substances are present in any of Innophos, Inc.'s phosphate products as added substances or at levels deemed to be significant such that warning language would be required for consumer products containing the substance. Naturally occurring trace elements may be present in our products, e.g., arsenic, lead, cadmium and mercury, but these substances are naturally occurring and thus exempt from exposure considerations under the Act and, therefore, not included within the scope of California's Proposition 65 initiative.

Proposition 65 is a law that applies to products (finished products) marketed and sold to consumers in California. The limits for dangerous chemicals in the law are expressed in daily intake or dose. Innophos, Inc. manufactures and sells products as bulk raw materials. These products are not manufactured or labeled for direct sale to consumers.

Please do not hesitate to contact us should you need further assistance regarding this matter.
